

# A PRODUCT SO GOOD...

## Our competition can't stop talking about it!

### **SIMPLE TO USE**

HOT STOP 'L' requires 3 simple steps to use, the competition requires as many as 20 steps! Do you want to compromise your life because you can't figure out how to use the fire containment device?

### **LIGHT WEIGHT**

Our kit is light-weight at 5 lbs, including gloves. Competitive options weigh in excess of 25 lbs!

### **ECONOMICAL**

Our kit is economical – we challenge you to compare the price of our solution to other products

## PROVEN & TESTED

### NO WATER required (Water Optional)\*

- Tested with an entire laptop case, keyboard and all related combustibles.
- Tested for Industrial Energy Products (IEP, Thomas Connolly/ Owner), along with several other candidate products, and proven to contain laptops by the FAA at the Atlantic City Tech Center in 2007. It was the ONLY product that passed the 2007 test and again proven to perform as required in 2008 round of tests in which it was the only candidate the FAA found worthy of retesting.
- Designed to contain a PED that reaches thermal runaway and contain it until it has burned itself out.
- By definition the product is approved since it fulfills all required parameters set forth by the FAA (contain fire, sparks & flames) WITHOUT WATER.
- Models include; Laptops, Flight Deck Tablets, Defibrillators and Cell Phones. All models are shielded to contain cellular signals.

*View authentic FAA test result footage (unbiased) with entire laptop in full runaway being fully contained at Baker-Aviation.com.*

*For independent video footage of bag testing to include testing with Major Airlines, please contact Tom Connolly at [tconnolly@iepindustrial.com](mailto:tconnolly@iepindustrial.com) or call (717) 492-1853*
