THE SOLUTION FOR SMARTPHONE BATTERY MELTDOWNS IS HOT-STOP® 'L' FIRE CONTAINMENT – NOW AVAILABLE

September 13, 2016 – Addison, Texas – Baker Aviation, the Master Distributor for the HOT-STOP® 'L' Fire Containment Kits, in affiliation with Industrial Energy Products (IEP), the manufacturer of the [HOT-STOP® 'L'](#) product line, offers a proven and tested containment solution for smartphone battery malfunctions that can cause fires and explosions on board aircraft.

In the wake of recent events and FAA recommendations to not charge or turn on a Samsung Galaxy Note 7 smartphone while on an aircraft, Baker Aviation is now offering the HOT-STOP® 'L' Fire Containment solution for mobile devices to the flying public and will make them available on Amazon.com soon as well as through other retailers.

“We have known about the smartphone threat for many years, and that is why we pioneered this fire containment solution for lithium-ion battery powered devices back in 2010,” stated Ray Goyco, Jr., President and Chief Operating Officer at Baker Aviation Maintenance, the Master Distributor for HOT-STOP® 'L'. “Our product is not only easy to deploy in case of an overheating emergency, but it can be used to safely store your smartphone or other device when not in use. The demand from airlines continues to rise for our proven product as unexpected eruptions continue to increase on aircraft around the world. Now with the recent smartphone issues, we recognized that the flying public also needs access to our products for their own protection and therefore we will be making them available for purchase on Amazon soon, and we are also exploring other retail options. Currently, there are no regulations by aviation authorities that require a containment solution on board an airline, but many are adding them for cabin safety,” added Goyco.

In addition to these small, light-weight smartphone containment bags that can easily fit into a carry-on briefcase or purse, HOT-STOP® 'L' Fire Containment products come in a variety of sizes for tablets, laptops and more. Immediate orders for the HOT-STOP® 'L' smartphone fire containment bags (\$529.99 plus shipping and handling) may be placed by calling 1-972-248-0457 or emailing Ray@Baker-Aviation.com.

The HOT-STOP® 'L' product line is the only one in this market to receive burn certifications and to safely contain fires, explosions and smoke emissions from Lithium-Ion powered devices without the need for water or an extinguisher. HOT-STOP® 'L' products have been successfully demonstrated twice in live fire evaluations at the FAA Technical Center in Atlantic City, New Jersey and further independently fire tested by flight departments and airlines.

About HOT-STOP® 'L'

The HOT-STOP® 'L' bags are made up of multiple durable fabrics with a felt inner core that has a 3200°F melting point which is sandwiched between two outer layers that have a 2080°F melting point and are proven to absorb energy and fire while eliminating the escape of smoke, sparks, and flames. Multiple sizes are available to fit various devices up to the large 25" x 25" bag designed to contain defibrillators and all-in-one computers and custom solutions are available.

The new EVOLUTION series of HOT-STOP® 'L' was recently introduced for airlines that are looking for containment solutions that will minimize the risk of unknown devices being brought on board, including portable charger/battery packs, e-cigarettes as well as internal equipment, such as defibrillators, and electronic flight bags that are carried inside the cockpit. The added zipper technology offers an additional layer of security with its zero tolerance, an airtight closure that is designed to contain a device in full thermal runaway until it has burned out. It can be deployed in less than five easy steps. To Learn more, go to HOT-STOPL.com.

About Baker Aviation

Baker Aviation is a full-service aircraft maintenance, management, and charter company, licensed to provide aviation services in the United States, Canada, Mexico, Central America and the Caribbean.
